RE: Draft Final, Corrective Measures Study Report, SWMU 58
Tooele Army Depot
UT3213820894

Dear Mr. Woodworth:

We have completed our review of the subject report. Our comments are as follows:

- 1) Appendix A, Groundwater Model Simulations for Selected CMS Alternatives: It appears that none of the scenarios presented include any uncertainty analyses. We would like to request that, at a minimum, Monte Carlo-type uncertainty analyses be run for the preferred scenarios 6A through 6C so that future, potential contaminant concentrations can be described in probabilistic terms at select, downgradient receptor locations.
- 2) Appendix B, Detailed Technology Descriptions: It appears that a technology description for monitored natural attenuation for the dilute portion of the plume (as recommended in the report) is missing. Please add that description.

Please prepare the final version of this report, incorporating these changes. Because of the time it will take for the computer simulation, please submit the final report by January 27, 2012. If you have any questions, please call Helge Gabert at (801) 536-0215.

Sincerely,

Scott T. Anderson, Director
Division of Solid and Hazardous Waste
